DETAILED ACTION

Claim Objections

1. Claims 9-14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot be dependent from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits. Claims does not refer back in the alternative form

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 1 recites the limitation "the variable gas flow channel" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by McElroy (US Patent 6,251,534).

Art Unit: 1745

In regards to claims 1-4, the McElroy reference teaches a fuel cell comprising a cathode flow plates, an anode flow plates and a diffusion layer disposed between the flow plates (Column 1, Lines 9-13). The reference also teaches a switching apparatus with a function capable of switching gas flow channels from parallel to series and vice versa. (Column 4, Lines 24-27).

In regards to claims 5-7, the McElroy reference illustrates two gas flow channels (Figure 3 and 4). McElroy discloses a stack of fuel cells (Column 2, Lines 66-67) with multiple flow field plates resulting in gas flow channels that equals to three or more leading to inlet and outlet (Figure 6, Components 610 and 620 respectively) manifold.

In regards to claim 8, the McElroy reference teaches an inlet and outlet gas flow path (Figure 1) that directs gas between one flow channel to another.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helen O. Chu whose telephone number is (571) 272-5162. The examiner can normally be reached on Monday-Friday 8am-4: 30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
